

# Theoretical Exercise 8

Date Published: June 21th 2023

## Exercise 1 Featuremap Sizes

Assume that the input image to a CNN has width and height dimensions of  $224 \times 224$ . Compute the feature map sizes (width and height) after the image passes through a first convolution layer (with kernel size 7, stride 1, padding 0), a second convolution layer (with kernel size 3, stride 2, padding 1), and finally a max pooling layer (with kernel size 2).

## Exercise 2 Number of Parameters of a Neural Network

ConvNet Configuration					
A	A-LRN	B	C	D	E

soft-max					

Compute the number of parameters in configuration A. Assume that the convolution layers use stride 1 and do not reduce the width and height of the input featuremaps.
